SUPPLEMENT No.1.1

to

DRIED, LIQUID, AND FROZEN EGG MEMORANDUM No.11

TO: All Resident Dried Egg Supervisors and Resident Egg Breaking Supervisors

FROM: Henry G.F.Hamann, Chief, Inspection and Grading Division
Dairy & Poultry Branch

SUBJECT: Paragraph E, Section II-b, on Page 7, of the 1944 Operating Requirements and Facilities for Dried Eggs

Reference is made to the above subject. This paragraph reads as follows:

"All dirty sound shelled eggs with loosely adhering dirt shall be placed in separate containers after candling, and such eggs shall be washed, rinsed, then sprayed with or immersed in bactericidal solution, and shell dried prior to breaking. Eggs shall not be washed in breaking, sterilizing or candling rooms or any room where edible product is processed. Wash water shall be warmer than egg temperature. Washed eggs shall be broken promptly after drying."

Recent information which we have received on this subject indicates that this particular requirement shall be strictly enforced by all of our resident samplers and supervisors of egg breaking operations. Any violations of this requirement shall be reported directly to supervisors and by them to this office.

It should be emphasized that such eggs shall be broken out as quickly as possible after washing, but not before shells are dry and free of adhering moisture.

With the advent of warm weather you should direct close attention to the question of blood rings which will become more prevalent.

It will be incumbent upon all supervisors to see that these instructions are adhered to without exceptions.

The subject matter of this Supplement should be incorporated in Memorandum No.11, Page 1, Paragraph III, as Sub-paragraph 8. Also please refer to my memorandum under date of February 5 with reference to proper adherence to sanitary standards and operating procedures.
